

## The planets

The planets are objects  
in the  
space .

There

are two kinds of planets .Those are the inner planets and the outer planets .

**Third C**

## The inner planets.

The inner planets are made out of solid rock. They are the smallest group of planets in our solar system. They have lots of volcanoes, ice, and rock. They are before the asteroid

belt.

## The outer planets.

The outer planets are made out of gas except one called Pluto. All of the other ones are gas giants but Pluto is so small, it is even smaller

than our own moon, which means that we are very big compared to it.

## The order of the planets

In our solar system there are many planets. Would you like to know their order???

The inner  
**FIRST: Mercury,**  
**SECOND: Venus,**  
**THIRD: EARTH**  
**FORTH: MARS.**

The outer  
**FIFTH: Jupiter**  
**SIXTH: Saturn**  
**SEVENTH: Uranus**  
**EIGHTH: Neptune**  
**NINTH: Pluto.**
