

ASTRONAUTS

Questions

The astronauts are astronaut corps. Thousands of people from all over the world apply to become NASA astronauts, but only about twenty are chosen. In order to become an astronaut, a person must work well with people, be able to communicate well, be eager to do the job, have work experience, have good grades, and have a college degree. Most future astronauts take a lot of science and math. It is very hard, and sometimes very dangerous to be an astronaut.

The NASA is...

An agency of the United States that go to space to in order to see our solar system.

Every two years, NASA must choose new members, charged with directing civilian programs in aeronautics research and space exploration.

NASA maintains several facilities, most notably the Johnson Space Center in Houston (which selects space crew personnel and is responsible for ground direction of space flights), and the launching pads at Cape Canaveral in Florida.

1. Can astronauts touch an asteroid?
2. Can an astronaut use jetpack in the space?
3. How many years does an astronaut stay in a planet?
4. How many years are needed to get to the Nasa?
5. What equipment do astronauts require in space?

ANSWERS:

1. No because asteroids are very fast.
2. No because maybe they get lost and die.
3. Depending how much oxygen and the planet they are going to.
4. They go to Johnson space center.
5. A helmet and a oxygen tank
